UTC Cambridge

Architect: Hawkins Brown

The UTC Cambridge, which opened in September 2014, will provide outstanding and inspirational educational opportunities for learners aged 14-19, linked to the globally-recognised growth industries of biomedical science and environmentally sustainable products and services (the Cleantech cluster) located in the Cambridge region. It will be a centre of excellence for Biomedical and Environmental Science and Technology (BEST), offering the opportunity to take a highly regarded, full time technical course of study.

The UTC will deliver a technical education to 670 students, who are looking for a career in the growth industries of biomedical and environmental science and technology. CMA Planning worked with Hawkins Brown on the project, preparing a Planning Statement to support the application as well as assisting with the submission and queries that arose. The application was approved unanimously by the City Council in 2013. It was Shortlisted for the RIBA 2015 East Regional Award.
